ChemicalInfo announces enhancement to service that helps chemical manufacturers increase sales

ChemicalInfo, providers of the most comprehensive online databases for chemical and pharmaceutical companies and those who do business with them, announces Q2 data enhancements to PathFinder. As part of the company's ongoing commitment to be the industry's preeminent resource for buyers and sellers of chemicals and pharmaceuticals, [PathFinder](#) now features:

- An additional 57,000 paths for a total of over 75,000 synthesis paths
- An additional 10,000 end products of over 22,000 end products
- An additional 35,000 journal entries and 56% more patents
- Over 18,000 intermediates
- Over 11,000 intermediate users

These additions enable ChemicalInfo members on the sales and marketing side to grow their market share by identifying potential intermediate users. Members on the R&D spectrum can hugely benefit from the added patent and journal updates. PathFinder is a unique tool used for identifying users of the raw materials a company sells.

"This additional information now offered in PathFinder helps businesses see how the chemicals they make are being used by others, creating a list of qualified sales leads of manufacturers using their products as intermediates," said ChemicalInfo CEO, Ernie Cote. "I'm very proud of our team, and their continued commitment to bring our members the information they need to grow their business."
